Order from SLA $1.10 63-16255

DESCRIPTORS: *Taste, Perception, *Glutamic acid, *Calcium compounds, *Condiments, Salts, Food, Vegetables, Hydrogen ion concentration.

There is deduced a quantitative connection between gustative glutamate effect and the pH value of a food. When peas and beans were sterilized with an infusion solution weakly alkalized with calcium hydroxide there was found at the organoleptic testing a surprisingly-good taste, which it was possible to attribute to a calcium-glutamate formation. With beans this effect does not occur with all varieties. (Author)
